Expert Health Management
Through Virtual Care

1. Revenue

2. Outcomes

3. Compliance

How Does Addison Work?

The Addison integrated voice-based processor and display are placed in one or more locations in a personal residence. You can interact with Addison using voice or touch screen features. Addison is programmed to remind, instruct and help manage personal care plans 24/7. Addison can record vitals, remind to take medications and look for indications of consumption and compliance, conduct interactive health assessments, send help during an emergency, or connect with our expert telecare support staff.

Addison can be integrated with EHR platforms and is designed with high end security, privacy and interoperability features. Addison can provide real time data and alerts to verify compliance or health anomalies. With reliable layers of increased connectivity and engagement, loved ones and providers can be confident that patients or at risk individuals are receiving superior care and oversight.

Breakthrough Virtual Patient Care

TeleCare Center Connected

Addison is connected to our advanced TeleCare Center staffed with RNs, CNAs and certified health coaches. Addison Care is a product of Electronic Caregiver Inc., the leader in telecare services and the designer of America's first, accredited TeleCare curriculum available through New Mexico State University. TeleCare Center representatives monitor and manage Addison system data, care plan updates, remote assessments, and help coordinate between health platforms and care circle stakeholders.

Emergency Response

With our Medical Alarm Monitoring Services, Addison can provide 24/7 emergency response activated by voice, touchscreen or wireless wearable alert sensor. Addison even offers an auto-fall detection wearable. In the event of an emergency, trained EMDs will respond and provide stay-on-the-line service until help arrives on site. Monitoring and emergency response services are provided by dual location, quadruple redundant, fully mirrored, state-of-the-art facilities staffed with the most qualified operators in America.

Vitals Monitoring

Addison guides patients through measuring a variety of personalized vitals which can include weight, temperature, blood pressure, heart rate, blood oxygen, blood sugar, or lung performance. Addison can provide care circle alerts when vitals are out of threshold, can conduct followup inquiries and patient health assessments, and digitally stores and manages personalized health data.

Activity Monitoring

Addison provides continued engagement with at-risk individuals and patients. Using voice, touch, reminders, gamification and motion analytics, Addison watches for indications of health plan adherence, health decline, or material disruptions to normal routines. Addison is programmed for customized responsive actions such as updating a health record, or alerting family members, carers or emergency response services.

Medication Reminders

Medication management has never been easier. Addison Care delivers fully customizable medication reminders. Addison reminds patients of when to take medication, what medication to take, what it's for and dosage information. Addison even monitors hand to mouth gestures watching for indications of medication consumption. If a patient forgets, they can simply ask Addison when they last took medications or when the next medication is due.

What Can Addison Do?

01 Vitals Monitoring & Alerts
